

ABSTRACT

Foldable bicycle and method of folding

5 The invention relates to a foldable bicycle (1) comprising a first
channel (10) for supporting handlebars (7) when folding the bicycle. The
invention also relates to a method of folding such a bicycle. This folding
method involves at least five horizontal folding axes (17,18,19,20,21)
allowing a compact folded bicycle to be obtained in which all the components
10 forming the bicycle are folded within each other.
